TE12513C & TE14515C

Low Maintenance Levels

The TE12513C and TE14515C tedders are crafted for low maintenance, allowing you to enjoy easy operation with extended service intervals. Spend less time on upkeep and more time on the field.

Easy Compact Transport

Thanks to the trailed concept, transporting the TE12513C and TE14515C is straightforward and compact. Move effortlessly between fields with this convenient and efficient transport design.

Minimal Hydraulic Requirements

These tedders require only one single and double acting outlet, simplifying your hydraulic needs. This makes them versatile and easy to integrate with various tractors, streamlining your operation.

Multiple Rotor Options

Available with 12 or 14 rotors, these tedders provide outstanding crop turning in all conditions. Whether dealing with dense or light crops, the TE12513C and TE14515C deliver consistent, high-quality results.

Innovative TerraFlow Ground Following System

Equipped with the new TerraFlow ground following system, these tedders feature a highly flexible frame that ensures exceptional ground adaptation. This results in superior crop turning capabilities, enhancing your overall productivity.

High Headland Clearance Position

Benefit from a high headland clearance position, which offers excellent maneuverability and reduces crop damage during headland turns. This feature ensures smoother operation and better crop protection.
